

Time Clock vs. Kiosk

See which of Raken's flexible time entry options is best for your business.

Time Clock

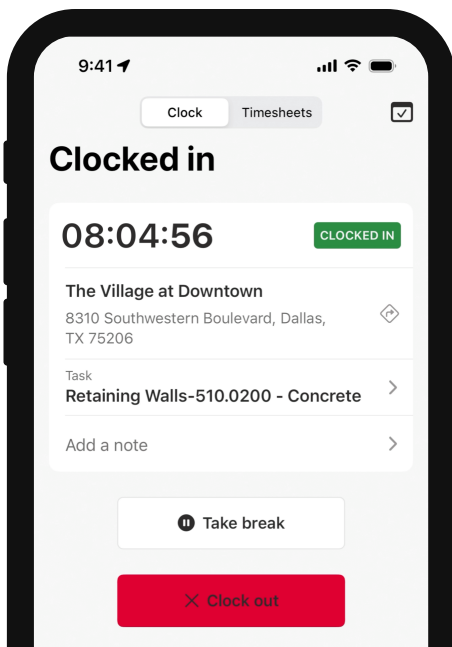

Workers clock in and out on their individual devices

How it works

1. An admin invites workers to download Raken's streamlined time clock app
2. Each worker clocks in, tracks breaks, and clocks out on their phone or tablet
3. Workers take a photo and answer any custom questions at clock in/out
4. The office reviews worker hours, GPS location, and photo verification

Why you should use it

- Frictionless, accurate time tracking
- Quickly identify violations
- Prevent time theft and buddy punching
- Save time for foremen and supervisors

Kiosk

Workers clock in and out on a shared device

How it works

1. An admin enables kiosk mode on a company or project level
2. In the field, kiosk is activated on a company phone or tablet
3. Workers clock in and out, take a picture to verify identity, and answer any questions
4. The office reviews worker hours, GPS location, and photo verification

Why you should use it

- Use a traditional-style time clock with digital convenience
- Manage the way workers clock in and out in a central location
- Save time for foremen and supervisors
